Project Background

The digital money market ushered in explosive growth in 2017. The expansion of the trading market, the exponential growth of popular digital currency prices, and the gradual formation of derivatives markets have attracted more influx of individuals and institutional investors, and have also aroused the attention of mainstream society. In 2018, the increase in the admission and application of large companies and financial institutions also reflected the trend of the digital currency sector moving closer to the mainstream market.

People tend to choose high-frequency trading systems for the rapid appreciation of digital assets. However, most trading strategy software on the market has many problems, such as poor product experience, poor service quality, poor security performance, single trading strategy, and high fees. Our aim is to provide our customers with a high-quality, high-performance, high-security, multi-strategy, low-cost one-stop quantitative trading platform.

Coinrobots Introduction

The Coinrobots brand began in 2016. The Coinrobots team focused on digital asset automated trading robots, multi-year trading strategy development and risk control experience, and the team has developed a number of finished product virtual currency trading strategy software, such as Martingale spot version, CHBTC spot arbitrage version, Martingale contract version and cross-platform spread arbitrage WEB version, which constitute a variety of customized strategies for

customers.

The Coinrobots team combines leading R&D capabilities with blockchain technology to create a one-stop quantified trading system in a transaction-like trading platform model to provide investors with a richer trading strategy and to avoid trading risks in the digital asset market. Committed to improving the liquidity of the digital asset market, integrating exchanges, market makers, and general customers into the Coinrobots ecological chain, and promotes the sustainable development of the global digital currency market!

Coinrobots Mission

Digital assets have become an important part of financial assets. We aim to provide digital asset investors with stable and secure automated trading robots and promote the development of digital assets and blockchain related fields.

Coinrobots Vision

We will continue to develop and upgrade trading strategies to allow users' stable and safe appreciation of digital assets. Coinrobots will gradually enter the world stage, continue to access the world's major digital asset trading platforms, increase multilingual versions, and serve digital asset investors around the world.

Coinrobots Advantages

Coinrobots specializes in automated trading of digital assets. The team has years of

experience in trading strategy development and risk control.

Multiple trading strategies

We set multiple transaction methods, fully extended custom parameter settings to meet your different strategic needs.

Efficient, safe and stable

The structure of the exchange-like systems ensures the clients' transaction efficiency, financial security and system stability.

Multi-language support

Digital assets are widely recognized around the world, and we are constantly receiving user consultations from countries such as Japan, Korea, Singapore, and the United States. We will support multilingualism in order to better serve our global customers.

Multi-terminal trading

We will support mobile version, computer web version, android version, and apple version.

Technical Support and Customer Service

We provide technical support and customer service for 7*24 hours.

Innovative charging model

A certain amount of ROBOT will be charged according to the turnover. The charge is scientific and reasonable.

Coinrobots Growth Line

In October 2016, Coinrobots team was established

In November 2016, Martingale spot version went online

In April 2017, CHBTC spot arbitrage version went online

In January 2018, Martingale contract version went online

In July 2018, Coinrobots quantitative trading system will be launched and the ROBOT will be initially issued.

January 2019, ROBOT will go online trading platform
